

MORAL DILEMMA NUMBER TWO

You are a doctor, and in your office, there are three people: a grandmother who cares for her three grandchildren, a young baby, and a tenth grade boy who is flunking out of high school. You have enough medical resources to save only one of them. Which one of them will you save?

ASK THE GROUP TO EXPLAIN WHY THEY CHOSE THE WAY THEY DID. IF THERE IS A STRONG MAJORITY OPINION, CHANGE THE PREMISE TO SWAY THEIR CHOICES. E.G. WHAT IF THE PERSON FLUNKING OUT OF HIGH SCHOOL IS YOU. THEN, ASK THOSE WHO CHANGED THEIR MIND TO EXPLAIN WHY THEY CHANGED.
